How to test the simple search extension - Firefox only.

1. Download
   https://drive.google.com/file/d/1MD7sKD6uDbbpeG4rpKpFXHiNSc0jveI2/view?usp=sharing
2. Unzip the zip file to get the extension folder.
3. Type **about:debugging#/runtime/this-firefox** into your Firefox browser.
4. Click "Load Temporary Add-On…"
5. Navigate to the extension folder and click "manifest.json".
6. The extension is now loaded. To test, check to see if there is a popup window with search results when you go to:

Removing the extension

Because the extension is a "temporary add-on," it will automatically unload itself when you quit out of Firefox.

To remove the extension without quitting, go to **about:debugging#/runtime/this-firefox** and click the "Remove" button.
